EDUCATION

Wesleyan University | Middletown, CT

Expected Graduation: May 2027

B.A. in Computer Science, German | GPA: 3.74/4.0

- **Relevant Coursework:** Software Engineering, Automata Theory, Discrete Mathematics, Logic & Functional Programming, Computational Media (Game Development), Data Structures
- **Honors:** Dean's List, Scholar-Athlete Honors Award
- **Activities:** Varsity Indoor and Outdoor Track and Field Captain

RELEVANT EXPERIENCE

turingpoint GmbH | Hamburg, Germany

Sep. 2025 - Dec. 2025

Software Engineer Intern

- Built a web-based CVE classification system in Python using LiteLLM to route Anthropic API calls, cutting manual research time by 85%.
- Automated data ingestion by integrating the Brave Search API with BeautifulSoup scraping.
- Designed and iterated on UI/UX mockups in Figma with engineers and product managers to make the tool usable by non-technical reviewers.

RESEARCH

Bioinformatics Research | Wesleyan University - Prof. Cohan, Prof Krizanc

Feb. 2026 - Present

Research Assistant

- Analyzed genome sequencing data to separate species-level genomes using Python and Pandas.
- Built a pipeline to gather data from the web, feeding it into Bakta, Roary, Veryfasttree, then Ecosim to get gene presence/absence trees, replacing a manual process and cutting runtime by half
- Visualized gene presence/absence trees with Matplotlib.

Additive Manufacturing Research | Wesleyan University - Prof. Chang-Davidson

June 2026 - Present

Research Assistant

- Developed a model using graph theory to simulate heat dispersion in a DED metal print.
- Simulated and printed different geometries to test accuracy and calibrate the software.

PROJECTS

Sports Warehouse | React Native, PHP, PostgreSQL, MongoDB

May. 2025

- Built a full-stack Android app with React Native (Expo), a PHP backend, MongoDB for product data, and PostgreSQL for inventory queries, as part of a 3-person team.
- Added inventory and order management features with full CRUD support.

TermiTama | C++17, CMake, FTXUI, JSON

Apr. 2026

- Built a terminal virtual pet game in C++17 using FTXUI with an FSM-driven lifecycle (Baby → Adult), four stat systems with offline time-delta decay capped at 12 hours, and a genetics engine with heritable stat caps and $\pm 10\%$ random mutation across breeding generations.
- Implemented a persistent save system using JSON serialization that auto-saves after every action, restores full game state on launch, and supports a Pet Box of up to 6 simultaneously active pets with free switching and adoption.

Typing Trainer | C++, SM-2 Algorithm, Sockets

May. 2026

- Implemented the SM-2 spaced repetition algorithm for adaptive bigram-difficulty scheduling; added local networked multiplayer, ghost-race replay, and per-session WPM/accuracy CSV logging in a custom terminal UI.
- Adapts to the user depending on what words and letters they make mistakes on, allowing for customized improvement for individual users.

Remindr | C++, Swift

May. 2026

- Built a cross-platform (macOS/Linux) desktop notification scheduler with a daemon/CLI split architecture, Unix domain socket IPC, natural language time parsing, and recurrence scheduling
- Swift helper for native macOS UNUserNotificationCenter notifications; persistent JSON reminder store via nlhmann/json

TECHNICAL SKILLS

Languages: Python, C++, C, JavaScript, SQL, PHP, C#, SMLNJ, GDScript

Frameworks & Tools: React, Django, Node.js, Git, MongoDB, Figma, LiteLLM, BeautifulSoup, JIRA, Microsoft Office Suite
